draws on historical context contemporary theory and close reading to deepen
our understanding of icelandic saga narratives about the island s early history

the theory of automorphic forms is playing increasingly important roles in several
branches of mathematics even in physics and is almost ubiquitous in number
theory this book introduces the reader to the subject and in particular to elliptic
modular forms with emphasis on their number theoretical aspects after two
chapters geared toward elementary levels there follows a detailed treatment of
the theory of hecke operators which associate zeta functions to modular forms
at a more advanced level complex multiplication of elliptic curves and abelian
varieties is discussed the main question is the construction of abelian extensions
of certain algebraic number fields which is traditionally called hilbert s twelfth
problem another advanced topic is the determination of the zeta function of an
algebraic curve uniformized by modular functions which supplies an indispensable
background for the recent proof of fermat s last theorem by wiles

the diagnosis of plant disease the microscope the autoclave the preparation of
