the goals of this text are to develop the skills and an appreciation for the richness and versatility of modern time series analysis as a tool for analyzing dependent data a useful feature of the presentation is the inclusion of nontrivial data sets illustrating the richness of potential applications to problems in the biological physical and social sciences as well as medicine the text presents a balanced and comprehensive treatment of both time and frequency domain methods with an emphasis on data

analysis numerous examples using data illustrate solutions to problems such as discovering natural and anthropogenic climate change evaluating pain perception experiments using functional magnetic resonance imaging and the analysis of economic and financial problems the text can be used for a one semester quarter introductory time series course where the prerequisites are an understanding of linear regression basic calculus based probability skills and math skills at the high school level all of the numerical examples use the r statistical package without assuming that the reader has previously used the software robert h shumway is professor emeritus of statistics university of california davis he is a fellow of the american statistical association and has won the american statistical association award for outstanding statistical application he is the author of numerous texts and served on editorial boards such as the journal of forecasting and the journal of the american statistical association david s stoffer is professor of statistics university of pittsburgh he is a fellow of the american statistical association and has won the american statistical association award for outstanding statistical application he is currently on the editorial boards of the journal of forecasting the annals of statistical mathematics and the journal of time series analysis he served as a program director in the division of mathematical sciences at the national science foundation and as an associate editor for the journal of the american statistical association and the journal of business economic statistics

this 5th edition of this popular graduate textbook presents a balanced and comprehensive treatment of both time and frequency domain methods with accompanying theory it includes numerous examples using nontrivial data illustrate solutions to problems such as discovering natural and anthropogenic climate change evaluating pain perception experiments using functional magnetic resonance imaging and monitoring a nuclear test ban treaty the r package astsa has had major updates and the text will reflect those updates in general the graphics have been improved new topics include random number generation modeling and fitting predator prey interactions more emphasis on structural models testing for linearity discussion of em algorithm is more extensive bayesian analysis of state space models and mcmc is more extensive including new scripts in astsa particle methods are introduced stochastic volatility coverage is expanded changepoint detection is introduced new topic the book is designed as a textbook for graduate level students in the physical biological and social sciences and as a graduate level text in statistics some parts may also serve as an undergraduate introductory course theory and methodology are separated to allow

presentations on different levels in addition to coverage of classical methods of time series regression arima models spectral analysis and state space models the text includes modern developments including categorical time series analysis multivariate spectral methods long memory series nonlinear models resampling techniques garch models armax models stochastic volatility and markov chain monte carlo integration methods this edition includes r code for each numerical example

this book describes analytical models and estimation methods to enhance performance estimation of pipelined multiprocessor systems on chip mpsocs a framework is introduced for both design time and run time optimizations for design space exploration several algorithms are presented to minimize the area footprint of a pipelined mpsoc under a latency or a throughput constraint a novel adaptive pipelined mpsoc architecture is described where idle processors are transitioned into low power states at run time to reduce energy consumption multi mode pipelined mpsocs are introduced where multiple pipelined mpsocs optimized separately are merged into a single pipelined mpsoc enabling further reduction of the area footprint by sharing the processors and communication buffers readers will benefit from the authors combined use of analytical models estimation methods and exploration algorithms and will be enabled to explore billions of design points in a few minutes
